HOW-TO GUIDE

HARDWARE INSTALLATION

How to Install iQ SmartWell

Installing iQ SmartWells is its own job, completely separate from a sensor installation. We put in these wells first — 14 inches tall, 6 inches round, with a secured lid absolutely flush to the ground so mowers can travel above it — and the GX-1 series sensors come to them afterwards, through their own installation process.

STEP BY STEP

1. **Open the surface**
   Mark the well location and remove the turf. This visit is for the well only — no sensor is set during an iQ SmartWell installation.

2. **Auger the hole**
   Use the same 6-inch hand auger to open the hole for the 14-inch-tall, 6-inch-round iQ SmartWell. Do not keep the turf for replacement over the lid.

3. **Seat the well at ground level**
   Set the well into the hole and adjust its seating until the closed lid is absolutely flush with the surrounding ground. The lid must not stand above grade.

4. **Secure the lid; leave it uncovered**
   Secure the lid and do not put the turf back over it. Recheck that it is absolutely flush to the ground, allowing mowers to travel above it.

5. **Ready for its sensors**
   The well installation ends here. The GX-1 series sensors come to these wells afterwards, through their own installation process.
